WorkforceIQ – Project Charter

Project Owner: Farzan Feeha | Independent Data Analyst / Project Coordinator
Project Type: HRIS / Data Analytics / Business Intelligence
Organization: Nexa Solutions (Fictional Company)
Project Duration: 10 Days
Tools: Microsoft Excel, PostgreSQL, Tableau, GitHub, Trello

1. Project Overview

WorkforceIQ is an employee analytics and HR operations project designed to help organizations better understand their workforce through data.

The project will simulate an HR department managing employee information across multiple departments. By organizing employee records, analyzing workforce trends, and developing an interactive Tableau dashboard, the project aims to demonstrate how data can support HR decision-making.

2. Business Problem

Organizations collect large amounts of employee information but may struggle to turn that information into useful insights. Common challenges include:

- Limited visibility into employee turnover.
- Difficulty monitoring recruitment trends.
- Inconsistent employee records.
- Limited understanding of departmental staffing.
- Inefficient workforce reporting.

3. Project Objectives

1. Develop a structured employee database containing fictional workforce information.
2. Identify employee data quality issues.
3. Analyze employee turnover, compensation, recruitment, and workforce trends using SQL.
4. Develop an interactive Tableau dashboard.
5. Provide actionable recommendations to improve HR reporting and workforce planning.

4. Project Deliverables

Deliverable	Tool
Employee datasets	Excel
Relational database	PostgreSQL
Data cleaning and analysis	SQL
Interactive HR dashboard	Tableau

Project timeline and risk register	Excel / Trello
Final business recommendations	Markdown

5. Project Scope

Included:

- 250 fictional employee records.
- Six organizational departments.
- Three years of historical workforce data.
- Recruitment and performance tracking.
- Employee turnover analysis.
- HR data quality assessment.

Excluded:

- Real employee information.
- Actual payroll processing.
- Live integration with Workday or other HRIS platforms.
- Automated employee management.

6. Success Criteria

The project will be considered successful when:

- The employee database is structured and usable.
- SQL queries produce accurate workforce metrics.
- Data quality issues are identified and documented.
- The Tableau dashboard displays relevant HR metrics.
- Project documentation is organized and available on GitHub.
- Final recommendations are supported by the data.

7. Expected Business Value

WorkforceIQ will demonstrate how HR teams can use organized data and business intelligence tools to improve workforce visibility, support operational decisions, and identify opportunities for process improvement.
